W.G.Cochran Esq., B.A.
Rothamsted Experimental Station,
Harpenden,
H e r t s.

Dear Sir,

In reply to your letter of the 27th May, I now forward two charts showing the layout and yields obtained from two cotton plots last season which, although uniform in treatment and variety, were picked in separate subplots.

I also attach a table giving results from a small scale trial, where uniformity of treatment and variety existed. The form of the table is equivalent to the layout.

Bailey and Trought in their bulletin "An Account of Experiments carried out to determine the Experimental Error of Fields Trials with Cotton in Egypt" (Tech. Bull. 63 of Ministry of Agric. Cairo) have published the original yield figures from the individual subplots of a number of uniformity trials.

I think a copy of this was probably sent to your library.

Yours faithfully,

T. Trought

for DIRECTOR,
AGRICULTURAL RESEARCH,
Sudan Government. *T.*
