DOMINION EXPERIMENTAL FARMS E. S. ARCHIBALD, B.A., B.S.A., LL.D., Director

ADDRESS REPLY TO RUST RESEARCH LABORATORY

(IN CO-OPERATION WITH THE MANITOBA COLLEGE OF AGRICULTURE)

Winnipeg, Man., May 5 1936 (AGRIC. COLLEGE)

Mr. W.G. Cochran, Rothamsted Experimental Station. Harpenden, Herts, England.

Dear Mr. Cochran:

I am pleased to be of service in your efforts to obtain an index of uniformity trial data. The yield figures enclosed are for 2304 square yard plots of barley grown in a field 48 yards square. This section of a larger field was sown in two directions as indicated on the front page of the data sheets, the object being to remove the drill-row effect which is a complicating factor in that it affects the variability of the plots cross-wise of the rows. When the grain came up the drill rows were indistinguishable.

I had intended to use these yields for a study of the effect of systematic arrangements and also to measure the bias of Semi-Latin Squares and did some work with the latter. However the correlation between adjacent pairs of plots is not high (about .5) and it was difficult therefore to demonstrate the bias in a satisfactory manner. I thought that this point might be of interest in case anyone should decide to use the data.

Yours very truly.

C. H. Goulden

C.H. Goulden, Sr. Cereal Specialist.

Encl.

Data Set 8 503 339

Yield in Grams of 2304 Square Yard Plots of Barley grown at

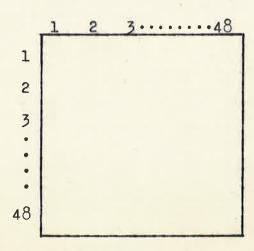

Dominion Rust Research Laboratory
1931

Field 48 yards square.

Sown in one direction at one-half of the usual rate and again at right angles at the same rate.

Harvested in square yards and yields of each plot taken in grams.

Location of plots given by the numbers at the top and left hand column of each page. The layout of the entire field was as follows -
